Reviews

*This is the finest book i have got go through right up until now. I have got read and i also am confident that i am going to planning to read once again yet again in the future. You will not truly feel monotony at at any time of the time (that's what catalogs are for about if you check with me).

INTRODUCTION TO THE GALOIS CORRESPONDENCE

[DOWNLOAD](#)

Springer-Verlag GmbH Apr 2013, 2013. Taschenbuch. Book Condition: Neu. 236x156x22 mm. Neuware - In this presentation of the Galois correspondence, modern theories of groups and fields are used to study problems, some of which date back to the ancient Greeks. The techniques used to solve these problems, rather than the solutions themselves, are of primary importance. The ancient Greeks were concerned with constructibility problems. For example, they tried to determine if it was possible, using straightedge and compass alone, to perform any of the following tasks (1) Double an arbitrary cube; in particular, construct a cube with volume twice that of the unit cube. (2) Trisect an arbitrary angle. (3) Square an arbitrary circle; in particular, construct a square with area $1r$. (4) Construct a regular polygon with n sides for $n \geq 2$. If we define a real number c to be constructible if, and only if, the point $(c, 0)$ can be constructed starting with the points $(0,0)$ and $(1,0)$, then we may show that the set of constructible numbers is a subfield of the field \mathbb{R} of real numbers containing the field \mathbb{Q} of rational numbers. Such a subfield is called an intermediate field of \mathbb{R}/\mathbb{Q} . We may thus gain insight into the constructibility problems by studying intermediate fields of \mathbb{R}/\mathbb{Q} . In chapter 4 we will show that (1) through (3) are not possible and we will determine necessary and sufficient conditions that the integer n must satisfy in order that a regular polygon with n sides be constructible. Englisch.
