OCLC Number: (OCoLC)58725925 Excerpt: . . . 2. 3 Geolnetries with a continuous spectrum of a deterministic or random nature of surface imperfections which have a continuous spatial spectrum, and, there-Now, considertile class fore, cannot be classified as discrete-mode waviness. Assunfing the spectrum to be homogeneous in the streamwise direction, one can integrate over all contributions of the folm (2. 1, ib) in order to arrive at the total coupling coefficient for any particular geometry. In addition to its dependence on the power spectral density R0 (awl) of the surface-irregularity distribution, the coupling coefficient also depends upon the relative phase distribution, 0 (aw,), between the dilferent wavenumber components of the surface undulations. IIowever, an obvious conclusion that holds for all geometries with a continuous spatial spectrum is that the integrated coupling coefficient is O (R. . Is) times smaller than the discrete mode solutions (2. 12) and (2. 14a), since the bandwidth in the at space which can contribute signifi-cantly to this integral is only of O (R : s). This makes the overall receptivity even smaller than that induced by an isolated roughness element with a comparable perturbation in height. Note that the receptivity is stronger for the discrete mode waviness of the form (2. 3), because the latter represents a peak in the spatial spectrum of the surface irregularity near the resonant wavenumber, and, thus, posseses more energy in the relevant band of wavenunlbers. Lacking a precise knowledge about the surface irregularities, it is not an easy matter...
